

OS/2™ Migration Solutions

OS/2 to Windows™

16-Bit to 32-Bit

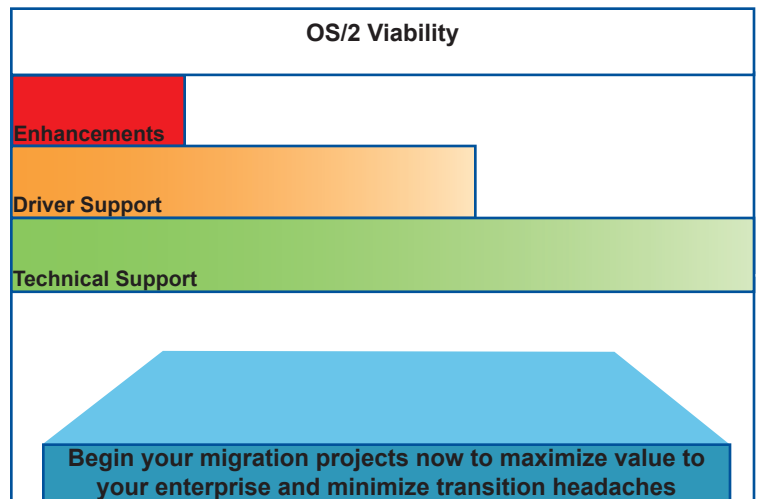

Unequalled expertise and experience to predictably and efficiently migrate OS/2 applications to industry standard platforms

The Time is Now

The end is in sight. Over time more and more OS/2 components have become functionally stabilized. It is likely that driver support and technical support will also phase out over time. Given that Windows offers significantly lower levels of total cost of ownership (TCO) and new levels of flexibility and security *the time to migrate is now.*

Preserve your investment in critical OS/2 applications with a predictable and efficient migration at a fixed price

You realize that transitioning from OS/2 to Windows is inevitable. The logical destination is Windows, but the task may seem daunting. MigrateC has been involved with over 300 OS/2 to Windows application source code migrations for corporate customers, such as Bell Canada, Caterpillar, and Payless; our OS/2 migration experience is unparalleled. By combining exclusive automation technology with a highly disciplined methodology and process, MigrateC enables companies to predictably and efficiently move applications to an industry standard platform.

The Answer is Simple

When you want it done right, think MigrateC:

- We have the patented methodology, processes, and specialized software to complete the job at the lowest possible risk, faster and for less cost.
- We offer the only software-enabled OS/2 migration solution.
- We enable you to predict the time and cost of migration projects before the job starts.

MigrateC Migration Model

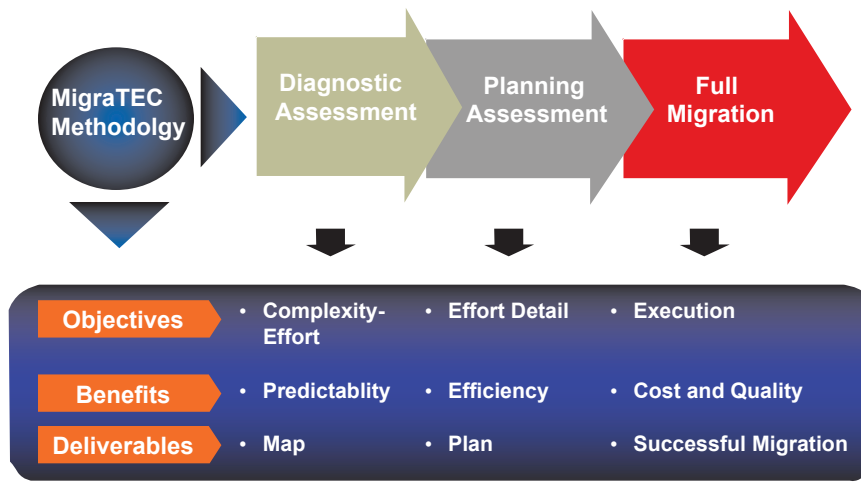

The MigrateC Migration Model is a three-phase engagement model. Our approach leads to a reduction in the risk, time, and cost of the migration project. The collaborative MigrateC-client effort includes:

- 1) Diagnostic Assessment
- 2) Planning Assessment

Diagnostic Assessment

The critical first step in the MigraTEC Migration Model is the Diagnostic Assessment which defines complexity, offers predictability and delivers a map for the full application migration project. Exclusive MigraTEC methods assure a thorough review of the application/project and a complete understanding of the full migration effort. MigraTEC prices the diagnostic assessment as a flat fee, at the end of which we will deliver the following:

- Application inventory, including 3rd party components
- Detailed analysis, including categorized issues
- Migration Issue Planning Summary
- Planning Assessment Schedule
- Planning Assessment fixed fee proposal

Planning Assessment

MigraTEC works with your staff to develop the full migration plan. Our software-enabled solution informs, validates, and improves migration management. When the planning assessment is complete, we will deliver the following:

- Technology Plan
- Resource Plan
- Quality Assurance Plan
- Risk Management plan
- Workplan Version 1
- Full Migration fixed fee proposal

Full Migration

MigraTEC's OS/2 Migration Solution takes the guesswork out of your migration project. Our predictable, data-driven process results in reduced project risk and enhanced project management. Better, cleaner code is ported in significantly less time than manual methods. At the conclusion of the migration phase, we will deliver high-quality migrated source code.

About MigraTEC

MigraTEC is the recognized expert in the migration of mission-critical software applications. Our exclusive software, integrated methodologies and enablement services help enterprises migrate predictably and efficiently to industry-standard platforms.

Founded in 1991, MigraTEC's expertise has made it the leader in C/C++ source-code migration automation technology. Our unique, powerful solution produces superior code and significantly reduces project management risk, time, and cost. These advantages have made MigraTEC the preferred partner for businesses who embrace the benefits of platform optimization.
